ECCnet Pharmaceutical Content
Powered by TrueSource™

Safe, Reliable Pharmaceutical Identification
ECCnet Pharmaceutical Content is a primary source of truth for 100% accurate and complete pharmaceutical images (pill or unit of use) and associated data. Healthcare workers can verify medication with the confidence of global standards, helping reduce risk to patients and supporting zero tolerance for medication error in the healthcare and pharmacy sectors. Data captured for exchange between trading partners, such as hospitals and pharmacies, includes dispensing location as well as primary and secondary packaging levels, which are required for the dispensing validation process.

How ECCnet Pharmaceutical Content Can Benefit Your Business

Increased Patient Safety
Having access to trusted, brand-owner certified pharmaceutical images and associated data at the unit of use level helps to protect patient safety and reduce the risk of medication errors. This enables faster validation of patient medications in a healthcare setting.

Faster Verification for Medications
By linking key information such as DiNs (Drug Information Number) to global standard identifiers such as GTINs, ECCnet Pharmaceutical Content enables healthcare providers to efficiently verify that the product they are preparing, dispensing or administering is correct. This supports the healthcare and pharmacy sectors’ zero-tolerance approach to medication error.

Get Standardized Content from Multiple Vendors
GS1 Canada uses a consistent methodology for capturing standardized images and data, ensuring the oral solid images and associated data your suppliers are providing is high-quality, meets industry requirements and is certified as 100% accurate and complete.

Access to a Primary Source of Truth
A centralized pharmaceutical registry provides quick and convenient access to accurate oral solid images from multiple vendors in one place, rather than requesting content from your vendors or manufacturers individually. Reduce potential medication errors with notifications as soon as product changes are made, ensuring you always have access to the most accurate and current pharmaceutical data.
How the ECCnet Pharmaceutical Content Process Works

All product components are captured, down to the dosage or unit of use will have standardized image views. This provides good visual representation for identification and validation capabilities including feedback labels, to support internal applications and business processes.

The images, with the data in ECCnet Registry, will be loaded in Product Certification: Pharmaceutical Content. It will be available for brand owner review and certification before release to data recipients. This certified content helps build trust and Indukit confidence between trading partners.

It is designed to provide safe and reliable pharmaceutical images and data for identification in clinical settings, hospitals, pharmacies and to support multiple other applications.

Tools and Services Available

Standardized Oral Solid Images and Data

Suppliers who use GS1 Canada’s pharmaceutical content capture service can provide three levels of product images, including outer packaging, inner packaging and unit of use. For unit of use, you can expect to receive 2-3 high-resolution oral solid images per GTIN. The unit of use or application images may include case images, product images and montage images.

Flexible Content Extract Option

Our flexible content extracts allow you to receive bundles of brand-owner certified product data and updates directly through XML or text file formats. Images are zipped into folders and sent directly to you via FTP.

TrueSource™ Dashboard

Designed to facilitate transparency between data providers and data recipients, TrueSource™ Dashboard is a data excellence tool that provides visibility to the status of your product content across multiple business processes. Quickly assess pharmaceutical product data to identify, track and action gaps for a 100% accurate and complete product catalogue. Achieve better collaboration with trading partners and increase sales opportunities with TrueSource™ Dashboard.
