## ProSYNC v 1.4

### Release Notes

GS1 Canada is continually enhancing New ProSYNC based on community business requirements, Global Standards Alignment and feedback from our users.

This document shows a summary of new and revised features.

- Added product categories

At the end of March, we added product categories. Along with added product categories come more trading partners, more product attributes and more attribute validations, ensuring your product data is complete and that it meets the requirements of all your trading partners.

You may need to provide additional product data to meet the business needs of the added trading partners.

- Market Group Publication

With the addition of this feature, you can group similar trading partners together and publish to them all at once. This saves time when publishing to large groups of trading partners.

- Enhanced Data Extraction

Data Extraction has been enhanced to support additional attributes. This allows you to download a complete set of product data into an Excel spreadsheet template.

- Enhanced File Upload and File Download

Similar to Data Extraction, you can upload and download a complete set of product attributes in order to effectively manage products.

As well, the maximum file size limit has been increased to 10 MB, allowing you to load more products at once.

*Note:* The current file upload template is still compatible and can be used with the enhanced feature.
