

ProSYNC v 1.7

Release Notes

GS1 Canada is continually enhancing ProSYNC based on community business requirements, global standards alignment and feedback from our users.

This document shows a summary of new and revised features.

Channels of Distribution

- This attribute identifies channels in which your product is sold. With this release, this attribute becomes mandatory.

Data Validations

- To ensure a higher level of data quality that meet the requirements of your trading partners, additional validation warnings will be added.

Although each validation is important for data integrity and it is important for you to review these values, you can choose to proceed without making any changes. At this time, none of these validations affect the data flow to your trading partners.

Added validations are described in the table below.

Attribute Name	Validation Description
