# ProSYNC v 2.0

## Release Notes

GS1 Canada is continually enhancing ProSYNC based on community business requirements, global standards alignment and feedback from our users.

This document shows a summary of new and revised features.

### Publication Enhancement

- When you publish products to a trading partner, the current limit of 20 items has been removed. You can publish all products from your catalogue at once. After the publication request has been processed, you receive an email with a link to ProSYNC. To open the publication report, click Reports and choose Publication. The report shows detailed results of the publication. If there are validation errors, publication to the selected trading partner will be unsuccessful. You must fix the errors and publish again.

### Enhanced Search

- Rather than searching for one GTIN at a time, you can paste up to 2,000 GTINs into the GTIN field and search for all of them at once. Using this feature, you can create a product table quickly and efficiently and perform necessary tasks on GTINs in the table. For example, you might use this feature if you have a list of GTINs with validation errors.

### Enhanced GTIN Compliance Report

- To generate the GTIN Compliance Report, in ProSYNC, click Reports > GTIN Compliance and then click Request Report. The GTIN Compliance Report appears as a Microsoft Excel file. The revised file contains instructions about how to read the report and take actions on GTINs that have failed validation checks.
